Professional Summary

Highly motivated Full Stack Developer with professional experience since 2021 delivering scalable enterprise applications, automation systems, healthcare solutions, and transactional platforms across multiple industries. Skilled in architecting and developing modern web applications using React.js, Next.js, Node.js, MongoDB, Java, MSSQL, and RESTful service architectures. Experienced in frontend engineering, backend development, enterprise workflow automation, healthcare application support, middleware integrations, and responsive UI implementation. Demonstrated ability to collaborate within cross-functional engineering teams to build secure, maintainable, and high-performance production systems. Strong background in enterprise healthcare technologies including Document Management Systems (DMS), Electronic Medical Record (EMR) engineering, and Laboratory Information System (LIS) integrations, alongside commercial applications with payment processing, referral systems, and fintech-inspired cashback workflows.

Core Technical Competencies

- **Frontend Development:** React.js, Next.js, Vue.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS, Responsive UI/UX Development
- **Backend Engineering:** Node.js, Express.js, Java, Spring Boot, RESTful APIs, Authentication Systems, Middleware Integrations
- **Database Technologies:** MongoDB, Mongoose, MSSQL, PostgreSQL, MySQL, Database Design & Optimization
- **Enterprise Systems:** EMR Engineering, LIS Middleware Integration, Document Management Systems (DMS), Workflow Automation
- **DevOps & Collaboration:** Git, Agile/Scrum, CI/CD Practices, Vercel, Firebase, API Integrations
- **Business Applications:** Payment Gateway Integration, Cashback Systems, Referral Logic, Enterprise Application Support

Professional Experience

Application Support Officer — Redeemer's Health Village

2025 – 2026

- Engineered and maintained a healthcare Document Management System (DMS) using Next.js, Node.js, and MongoDB to optimize secure hospital document workflows.
- Developed a desktop scanner integration agent that automatically monitors scanned files and uploads them directly into the DMS ecosystem, improving operational efficiency.
- Contributed to the engineering and maintenance of the hospital's Electronic Medical Record (EMR) system built with Java technologies.
- Implemented and maintained LIS middleware integrations to support seamless healthcare data communication and workflow synchronization.
- Provided enterprise application support, deployment assistance, troubleshooting, and production system optimization across mission-critical healthcare applications.
- Collaborated with technical teams and healthcare stakeholders to improve application reliability, scalability, and user experience.

Frontend & Backend Engineer — Momas Electricity Meter Manufacturing Company (MEMMCOL)

2024 – 2025

- Contributed to the architecture and development of GridFlex, an enterprise-scale energy monitoring and management platform.
- Developed scalable backend services and APIs using Java Spring Boot and service-oriented architecture principles.
- Built responsive and high-performance dashboards using Next.js for real-time energy analytics and monitoring.
- Implemented authentication systems and role-based access control mechanisms for enterprise users.
- Participated in Agile engineering workflows including testing, debugging, optimization, and collaborative code reviews.

Full Stack Developer — Freelance & Contract Projects

2021 – Present

- Designed, developed, and deployed scalable full-stack applications across healthcare, automation, fintech, and e-commerce industries.
- Built modern frontend interfaces and backend systems using React.js, Next.js, Node.js, MongoDB, Java, and RESTful APIs.
- Integrated secure payment gateways, referral systems, discount engines, and cashback workflows into transactional business applications.
- Developed responsive dashboards, management systems, and enterprise workflow applications with optimized user experiences.
- Collaborated with teams and clients to translate business requirements into maintainable, production-ready software solutions.

Selected Professional Projects

- **Healthcare Document Management System (DMS)** — Engineered an enterprise healthcare document workflow system with automated scanner integration for secure document processing and retrieval within hospital operations.
- **Smart Breaker Home Automation Platform** — Collaborated within a three-engineer team to develop a smart breaker and home automation application using Java technologies for intelligent appliance control and smart energy management.
- **Epilux Water E-Commerce Platform** — Built a scalable e-commerce and transactional platform using Next.js, Node.js, MongoDB, and Mongoose with integrated payment processing, referral bonuses, cashback workflows, and discount systems inspired by modern fintech platforms.
- **Enterprise Energy Monitoring Dashboard** — Developed responsive frontend dashboards and backend integrations for enterprise energy monitoring and operational analytics.

Education

B.Sc. Computer Science

Bamidele Olumilua University of Education, Science & Technology, Ikere Ekiti

Graduated: November 29, 2024
